**STEVE HORELICK CONTINUES TO ENLIGHTEN LOGIC PRO
USERS WITH 'ES2 EXPOSED' ONLINE TUTORIAL SERIES
FROM macProVideo.com**

*Latest Lesson from Emmy-Nominated Composer/Sound Designer Uses
Nonlinear Educating Device (N.E.D.) to Unveil the Secrets of Logic's
Powerful ES2 Soft Synth*

VANCOUVER: The ES2 synthesizer in Logic Pro stands as one of the most powerful, flexible – and complex – software instruments available. Electronic music producers, sound designers, and programmers can now realize its full potential, as Emmy-nominated composer Steve Horelick goes deep inside this fascinating synth with his latest tutorial, “ES2 Exposed”, available exclusively at www.macprovideo.com.

Comprising over 2.5 hours of video divided into 47 lessons, “ES2 Exposed” takes users on a highly educational road trip through each of the ES2’s sections, unveiling the hidden connections that can radically shape the audio path. An Apple-certified Logic Pro trainer and award-winning TV, film, and interactive media composer, Horelick applies his thorough working knowledge of the ES2, deep experience with principles of synthesis, and a healthy sense of humor to each section of this essential tutorial.

Horelick – along with his mischievous assistant/alter ego Igor -- set his sights on the ES2 following the enthusiastic response to his macProVideo.com tutorials on two other key Logic soft synths, “Synthesis with Sculpture” and “Ultrabeat Unleashed”. “The ES2 is one of the oldest synths in Logic, and one of the most underutilized due to its complexity,” Horelick says. “This one little plug-in has everything from FM synthesis to ring modulation to vector synthesis, digiwaves to very complex filters, and routing that you’re not going to be able to use unless you understand exactly how it works. It was the perfect object of my studies to demystify this wonderful synth.”

The extremely flexible ES2 is ideal for creating rich atmospheres, arresting leads and haunting pads, as well as rhythmic patterns and evolutionary sounds that morph over time. "It's got a lot of depth, and all of these strengths can be combined," notes Horelick. "My goal for all of my synth tutorials is for us to not just go to the presets, tweak a couple of knobs and hope that we come up with something new. There are all these amazing worlds to explore in ES2, and the true power comes with knowing how it really works so we can best use it."

"ES2 Exposed" features macProVideo.com's innovative Nonlinear Educating Device (N.E.D.) tutorial video player. N.E.D. is a revolutionary integrated download manager that incrementally and progressively downloads tutorial videos, allowing subscribers to start watching tutorials immediately while the rest download in the background. Even if the connection is dropped, N.E.D. will resume the download where it left off the next time an Internet connection is made. Importantly, all downloaded tutorials remain on the user's computer and can be viewed at any time, even if the computer is removed from an internet connection.

"The N.E.D has grown up: It now delivers full-screen tutorials with superb audio and video quality," Steve Horelick says. "For online education, there's nothing like what macProVideo.com has created with this delivery device."

macProVideo.com Publisher Martin Sitter concludes, "With the release of 'ES2 Exposed', Steve Horelick solidifies his position as a modern master of education. We release many high-quality tutorials by the multimedia industry's top educators, but this is by far the most entertaining tutorial-video program in our roster."

Steve Horelick's "ES2 Exposed" is priced at \$39.50 and is available via download only through macProVideo.com. More information and free previews are available at www.macprovideo.com/tutorial/Logic206.
